Movie Recommendation Website

- User Driven Growth- Using several api's and a RottenTomatoes web scrape, our acquires data about movies as a user search for it.
- Recommendation Algorithm- Compares overlap in individual user's movie preferences to build list of movies the user is most likely to enjoy.
- Recommendation Base - Most difficult problem for Recommendation Engines is a starting a dataset to compare against. Our RottenTomatoes web scrape populates our database with the Top Critics of each movie as they are searched, so there was always a variety of opinions to measure movie preferences against.
